FIRE PROTECTION

The Fire Safety Assessor's Site Inspection Methodology

A practical guide to conducting professional fire safety inspections. The course covers inspection planning, building familiarisation, system-by-system assessment, identifying potential compliance concerns and reporting findings.

NOTIONAL HOURS	ASSESSMENT	PRICE
3 hours	**Formal Assessment**	**$85 inc GST**

COURSE OVERVIEW

The Fire Safety Assessor's Site Inspection Methodology provides Fire Safety Assessors with a structured approach to conducting thorough and defensible building inspections. The course explores the complete inspection process, from preparation and documentation review through to building familiarisation, assessment of individual fire safety measures, identification of warning signs and professional reporting of findings.

Participants will learn how to evaluate fire safety measures within the context of the building's overall fire safety strategy rather than viewing systems in isolation. The course also examines the importance of evidence gathering, recognising red flags that may indicate deeper compliance issues, and communicating findings clearly and objectively.

WHO IT'S FOR

- Business owners
- Managers
- Supervisors
- Human resource personnel
- Workplace trainers
- Compliance professionals
- Educators
- Fire Industry

KEY LEARNING AREAS

- Planning the Inspection
- Building Familiarisation
- System-by-System Assessment
- Identifying Red Flags
- Reporting Findings Professionally
